Re: PFH Series PTFE Lined Flexible Metal Hose (3,000 psig)

Dear DK-Lok Distributors,

We are pleased to announce the new product introduction of PFH Series PTFE Lined Flexible Metal Hose that is constructed of a PTFE liner inner core with a Stainless steel external braid. The main features of PFH hoses are offering a bacteria free transfer of media with less turbulence and increased flow for easier cleaning and faster transport. This product works well in Pharmaceutical, Food and Beverage, Chemical and other applications that require conductivity to help prevent static-electric discharge.

Stainless steel end connection is available in 1/4" and 3/8" at the moment and the other bigger sizes will be developed in the future.

Product literature is attached and the pricing will be provided by factory due to the variety of factors of overall length, clamping and packaging etc..

Physical samples can be shipped within 6 weeks and the published literature already has been included in the full binder from June 1st, 2014.

DK-Lok continues to grow its product offering in an effort to assist distribution in becoming a single source for customers for all their small valve and fitting requirements.

Sincerely yours,

A handwritten signature in black ink that reads "John".
